SKILLS

Ruby, Python, Go, TypeScript, SQL | Rails, Celery, Tornado | AWS (EC2, Lambda, S3, RDS, IAM, Secrets Manager, SQS/SNS, CloudWatch, DocumentDB), Kubernetes, Docker, Terraform, Linux | Kafka, Datadog, PagerDuty, Elasticsearch, PostgreSQL, MySQL, Redis | System Design, Microservices, Event-Driven Architecture, Serverless | Git, GitHub Actions, CI/CD, TDD, Agile

EXPERIENCE

2U, Brooklyn, NY

August 2022 - Present

Senior Software Engineer (Team Lead), August 2022 - Present

Led 8-person team (2 FTEs + 6 contractors) owning 3 production systems: multi-tenant Rails CRM, Python data export platform (70+ global university partners), and payment gateway routing to 4 providers; onboarded and mentored 15+ engineers over tenure

- Led cross-functional architecture reviews spanning product design, code review, and third-party integrations; authored SLAs and CDE architecture diagrams; partnered with Security and SRE on tooling and compliance
- Maintained self-managed Kubernetes on EC2; designed S3 lifecycle policies with tiered IAM permissions for sensitive document retention and DB backups
- Led Ruby 2.7 3.2 and Rails 5 7 upgrades as strategic tech debt reduction; zero-downtime deployments across all services
- Reduced CI runtime from 105 min to 16 min (85%) through parallelization and test infrastructure optimization
- Architected PCI-compliant secrets rotation using AWS Secrets Manager with pre-cutover validation, automating 100+ credentials across payments, partner integrations, and APIs
- Automated manual partner data exports into Python/Celery service delivering 350+ scheduled jobs; optimized batch queries against 1B+ records with Redis caching and connection pooling
- Managed 70+ AWS Lambda functions with isolated IAM for FERPA-compliant partner data transfers
- Built Datadog dashboards and CloudWatch alerting surfacing regressions in <5 min; owned SLA monitoring, incident response, postmortems, and PagerDuty primary oncall rotation
- Part of company-wide Claude pilot; helped team adopt AI-assisted development and AI-first Epic planning

Software Engineer, August 2018 - July 2022

Migrated 4B+ records across 13 tables from Python/MongoDB to Rails/MySQL with zero downtime; built fault-tolerant ETL with idempotent recovery and live schema changes via Percona toolkit

- Built throttled ETL API with rate limiting, cursor pagination, and structured logging to prevent downstream saturation during partner data syncs
- Implemented Elasticsearch indexing enabling full-text search across previously slow SQL-dependent queries

EDUCATION

B.S.

Villanova University

Full-Stack Web Development Immersion

Flatiron School
